Enquiring minds want to know...What is ESG?

At Delta CleanTech, we are proud to have pioneered Environmental, Social & Governance (**ESG**) driven solutions since 2005; capturing CO₂, **the villain of climate change**. In our view, ESG simply stands for sustainability.

Environment - Carbon capture has a significant beneficial impact on our planet by trapping carbon dioxide at its emission source, containing and isolating it. Carbon capture de-carbonizes energy and captures CO₂ caused by industries from entering the atmosphere.

Social - All companies have a responsibility to their employees and the communities in which they operate in terms of working conditions, labour rights, diversity and social license.

Governance - Serves as a control mechanism within corporations to clearly define the ESG principles of the organization for the long-term benefits for employees, shareholders, community and society at large.

Meet Canada's Pioneer of Solvent Purification & CO₂ Capture Optimization

Todd Beasley is a key component to the success of Delta CleanTech as our Manager of Business Development. He is considered by our industry to be a pioneer of solvent, ethanol and glycol extraction and purification systems in North America.

"We're doing good things for society and the planet, nothing better than that."

- Todd Beasley
