Delta's Dr. Ahmed Aboudheir Feature Speaker at Gas Processors Association of Canada Conference

Regina, Saskatchewan – April 1, 2018 - HTC Purification Corp. is pleased to announce that Dr. Ahmed Aboudheir – HTC's Chief Technology Officer, was a feature speaker at the Gas Processors Association Canada (GPAC) conference recently held in Calgary, Alberta.

Dr. Aboudheir's presentation was entitled "**Delta Reclaimer Operation and Performance at the SVM CO₂ capture facility**". In his presentation he discussed how the Delta Purification Systems™ can optimize gas processing by assisting the gas processing facility to meet production capacity and clean up targets at a minimum operating cost, emissions to atmosphere, and waste for disposal.

About Delta CleanTech

Delta CleanTech has over 16-years of experience in the Clean Tech Energy Sector and is considered a technology industry leader in CO₂ Capture; Solvent, Ethanol & Glycol Reclamation and Hydrogen Fueling Infrastructure.

Delta was one of the world's first energy technology companies to pioneer ESG solutions for corporate and government responsibility of Identity Preserved Waste™ ("IPW™").

Delta's patented CO₂ Capture LCDesign™ and PDO Engine™ along with the Delta Reclaimer® technology provides customers with IPW solutions by providing low cost methods of capturing and utilizing CO₂ emissions that not only can they reduce the carbon footprint, but also maximize carbon utilization revenue potential, while at the same time qualifying for carbon credits recognized by Government taxing organizations.

Delta has developed intellectual property in the area of reforming methane to hydrogen and the related production of Blue Hydrogen through the capture of CO₂ from the reforming process.
