Delta CleanTech featured in the news with Kitco! Carbon Credit Streaming Opportunities

“ HIGH FIDELITY
COMPLIANCE
CARBON CREDITS
COULD CREATE
ARBITRAGE
OPPORTUNITIES IN
THE SECTOR. ”

Delta CleanTech’s own Executive Chairman, Lionel Kambeitz, was recently interviewed by various media including Kitco News, where he spoke directly with the Editor-in-Chief and Lead Anchor Michelle Makori. For those not in the know, Kitco is a leading media company providing incisive and in-depth reporting and information that can help investors in their market decisions.

Various things they discussed were the financial opportunities related to the origination, aggregation and sale of compliance and voluntary carbon credits with an emphasis on the importance of controlling technologies that originate and produce these carbon credits in the value chain.

“ There’s a chance for two opportunities in arbitrage – to be able to buy carbon credits that are newer and have less fidelity. ”

It has certainly been a busy time for Lionel, as he was also interviewed by Justinas Baltrusaitis, of Finbold News recently. Their article, featuring Delta CleanTech’s Lionel Kambeitz, discussed how exchange traded funds (ETFs) could likely be a key vehicle for carbon credit environmental, social, and governance (ESG) investing.

The interviews took place at the conclusion of COP26, the UN climate change conference that was recently held in the UK. As the world's largest corporations are increasingly turning to financial products to offset their environmental footprint, voluntary carbon credits (carbon offset credits) are a powerful driver in the industry. As noted by Kitco, the carbon offset market is forecasted to increase to over \$1 Billion in 2021, and according to McKinsey Consulting, this market could grow 100-fold by 2050.

“ Voluntary carbon offset origination must create an accountable, quantifiable, permanent and an independently verified reduction in GHG emissions that are tangible. Many carbon offset projects use third-party verified standards to approve their carbon credits and follow rules and procedures set out by independent third-party organizations, in particular Verified Carbon Standard and the Gold Standard ”

“ Together, these audit and accredit about 70% of the offsets in today's voluntary market. The price of these carbon offset credits may vary widely depending on the jurisdictional oversight, third party audit and verification integrity and fidelity protocols. ”
