The Delta CleanTech Tour Hits the Mark!

Over 35 industry people attended the Sheppard CO₂ tour at the Calgary facility on November 30th, 2021. Jeff Allison, President of Delta CleanTech Inc, introduced and welcomed all attendees. Our tour attendees were some of Canada's most recognized energy, petrochemical, and fertilizer companies.

"It was evident that the cost associated with carbon penalties was top of mind. However, it was explained that the income streams after CO₂ capture and verification were substantial, through the monetization of compliance carbon credits, avoidance of penalties, and the value created at the corporate level, demonstrating sustainability and a company culture that embraces ESG."

-- Larry Gregga, attendee and Industry Consultant.

Meet Jacelyn Case, Chief Financial Officer of Delta CleanTech

"I was thrilled to experience our active and commercial CO₂ Capture Plant in action in Calgary. I felt like I witnessed the operation of some of the most advanced CO₂ capture technologies in the world!" said Jacelyn Case. "It was a privilege to be a part of the DELTA Team in action alongside many other Executives and Decision-makers from well-known Canadian companies, who were there to be inspired and to experience how CO₂ capture technologies work."

"Together we will build a better world, one smokestack at a time!"
