Delta's Engineering Team Gains Two Carbon Capture Experts to the Delta CleanTech Roster

September was a banner month for Delta as we welcomed two new Engineers to our growing family. We are pleased to introduce Peter Peng, PL.Eng, MBA, PMP. as CCUS Program Manger to the Delta CleanTech Engineering Team in Calgary, Alberta. Mr. Peng has over 30 years of experience in the Oil and Gas Sector in both Canada and China, so to say he will provide a vast wealth of knowledge is an understatement and we couldn't be more excited to have him join us.

"We are very excited to add two senior and skilled engineers to our team in both Calgary and Regina. This will help us in handling more projects in both Canada and overseas."

*-Walid ElMoudir,
Delta Process Engineering Manager*

Peter Peng, Delta CleanTech's newest member to the Calgary Office of the Engineering team!

Joining us in the Regina offices, we welcome Shoummo (Sam) Aydin, MSc., EIT as a Process & Project Assistant. Mr. Aydin has more than eight years of experience in Carbon Capture Research and Development at the University of Regina. With two master degrees in Industrial and Chemical engineering from both the University of Regina (Canada) and Jadavpur University (India). His work and academic pedigree have already made Sam an important contributor to Delta's technology-driven projects.

"Even though engineers are becoming more difficult to attract, Delta's reputation as an innovative and growth- focused company allows us to attract such amazing talent such as Peter and Sam."

*-Jeff Allison,
Delta President and CEO*
